

# Waste Management – Whyalla Shared Facility

**Waste must be contained, segregated & removed for disposal or recycling  
DON'T WALK PAST NON-COMPLIANT WASTE MANAGEMENT – SET THE STANDARD HIGH**

## Why is waste management important?

- The regulatory conditions which LPS / SIMEC Mining operate within state very specifically how waste produced on-site must be managed.
- Non-compliant waste disposal impacts not only LPS / SIMEC Mining but also our environment.
- Non-compliant waste disposal can cause contamination, environmental damage, and expensive clean-up costs.

## What do we need you to do?

- Ensure that you put waste in the correct bin.
- Only put Liberty / SIMEC waste in our bins – No waste from home is allowed.
- Recycle where possible - Recycling should be part of our daily work routines – it is our responsibility to make it happen.
- Good waste management can be as easy as putting recyclables into a different bin...that's no effort at all!
- Don't cross contaminate – if it can't be recycled do not put it in the recycling bin.
- Make sure that waste pallets are free of packaging and scrap metal – only the timber can be recycled.
- Follow housekeeping rules in your area

## What do we recycle?

## Our Core Environment Rule for waste management

**Waste must be disposed according to the approved waste management practices in WI50.403.**

- Don't bring waste materials onto LPS/SIMEC Mining sites from external sources (i.e. household rubbish)
- Segregate wastes by material type (i.e. wood, metal, oil, grease, cardboard, general waste)
- Store or dispose of waste types in defined areas as per signage or WI50.403
- If in doubt, consult WI50.403, Site Services 4448 / Contractor Controller

We all want to work in an environment we can be proud of...
