

Task Environmental Considerations

BEFORE STARTING A JOB-

1. Consider ALL potential environmental IMPACTS
2. Are you aware of the environmental CONTROLS that must be in place?
3. Are all environmental hazards and associated controls adequately covered in the paperwork and communicated?

1. Consider ALL potential environmental IMPACTS Ask yourself these questions -

- Will it cause dust/fume emissions?
- Will there be waste produced and where will it be disposed of?
- Is there potential for leaks?
- Are all pollution controls working effectively (e.g. sprays, dust collectors, road dust suppression)?
- Is there a contingency plan if something goes wrong?
For example - stopping pollutants entering a drain, the atmosphere, or soaking into the ground
- Are water & energy being used efficiently?
- Will any vegetation need to be removed or cleared?

2. Environmental CONTROLS

- Are you aware of all the environmental controls that must be in place for the job?
- Are the controls adequate (i.e. preventing environmental impact)?

3. Are all environmental hazards and associated controls documented & communicated?

- Have all the environmental hazards been addressed / controlled and documented. i.e. in a WI, QP, in a separate Environment Management Plan (EMP), covered in SSOW paperwork (JSEA), Take-2.
- Responsibility for each control measure must be assigned in the paperwork and communicated to all involved.

What is your individual responsibility?

- You must read, understand and adhere to all environmental controls associated with the task
- If any of the controls are not effectively preventing environmental impact talk to your supervisor
- If in doubt contact the Environment Department (4450)

Don't look at me, it's his responsibility.
